Fisher et al 2015 EIC Paper 20150515 FINAL.docx

Hi Jeremy, sounds like a plan! Here is the final version for your files.

Thanks all.

Yes, I think we can just get rid of the pejorative and it still gets the point across. Sorry about that.

Just kill the highlighted phrase.

A widely used “statistical” approach for estimating avoided emissions....

Thanks Robyn!

Hi Jeremy and Nidhi,

I reviewed your final clean version and it looks excellent. I read through it and I made a few minor changes. I also wanted to ask if we could change the word “fraught” on page 5 of the background section? (we can use our call today to discuss if it is easier to consolidate time.)

A widely used, although fraught, “statistical” approach for estimating avoided emissions is to simply calculate an average emissions rate of all operating EGUs in a region....

Attached is a very close to final version that has very minor edits, so you can see what additional changes I made. Once we resolve the question above I think we are ready to send it off for posting on the EPA Emissions Inventory Conference website!

Thank you for your excellent work and addressing all my comments.

Robyn

Subject: Revised EIC Paper

Hi Robyn,

As promised, here is the final EIC paper! Thank you very much for your thoughtful and detailed edits and comments. Between Jeremy and myself, this version addresses those edits and comments, makes a few other revisions, and has undergone a final close read/copy edit to

streamline text and language.

I'm attaching three documents, so you have the history of what happened.

- 1) The first is the final clean version. From our perspective, this is ready to submit as soon as you add your mailing address. Of course, if you have any last minutes questions or comments, feel free to make them/let us know. We are both in the office tomorrow.
- 2) A heavily red-lined version that includes your comments, and Jeremy's and my edits.
- 3) A lightly red-lined version that took 2, accepted all changes, and did a quick copy edit for language and typos (called NRSpmedit).

Again, let us know if you have any questions at all. Otherwise, we look forward to seeing it uploaded on the EIC website soon. And, congratulations again on this excellent work!

Best,

Nidhi
